Christmas Wreath Care

We handmake our Christmas Wreaths, Candy Canes & Swags out of the freshest Douglas Fir & Fraser Fir boughs. All are made to order.

We cut them ourselves at the time when the tree is starting to go dormant so the needles are set, but before they start to yellow. This gives you, our customers, the maximum enjoyment time possible.

Wreaths do not like to be sandwiched underneath your storm door. The sun shining on the glass door will turn your wreath yellow, then brown. In Western New York, you can get away with this only if your door is on the North side of your home.

Decorating the outside of your home here in Western New York, this wreath will last well into January or February. No additional care or watering required. We offer small wreaths that look wonderful on windows, large wreaths that beautify your chimney, the peak of your house or barn, and every size in between.

If you choose to bring your wreath indoors, you will not be able to enjoy it as long, but the aroma of fresh pine in your home may very well make it worth the sacrifice. Spritz your indoor wreath with water daily, and avoid hanging near heat sources and ventilation ducts.
